

The

UFO

Enigma

Volume 9, Number 6 FEBRUARY 1989

The Enigma is a newsletter published monthly, except in the summer, by the UFO Study Group of Greater St. Louis, Inc. - P.O. Box 31544 - St. Louis, MO 63131. The UFO Study Group is not affiliated with any national society, but is a nonprofit organization dedicated to the investigation and reporting of unidentified flying objects (UFOs). Membership is \$8.00 per year beginning each September.

VALLEE'S DIMENSIONS REVIEWED AT JANUARY MEETING

By John Roppolo

The UFO Study Group meeting of January 8, 1989 led off with the welcome news that we have an extension on the use of the Farm & Home Savings and Loan building until the end of May. After our May meeting, then, we will have to move elsewhere for our monthly meetings. We welcome suggestions for a new or alternate meeting place for the 1989 - 1990 season.

The presentation for January was a book review by John Schroeder on Jacques Vallee's book Dimensions. In this book, Vallee called for a re-examination of UFO's - as real, physical objects but not extraterrestrial in nature. Instead, Vallee brings up the idea that UFO's exist in a different space-time continuum, and occasionally show up in our "dimensions" of existence.

Vallee mentions that UFO's have been sighted throughout history; as early as in 12th century China, as well as the Biblical accounts of Ezekiel's "wheel within a wheel". The various mysterious and often monstrous creatures associated with UFO's (such as reports of moth and scorpion men) are also described by Vallee, and he brings up the idea that these creatures are sometimes thought to be crossbred by UFO "travellers".

There is also a factor of deception and cover-up in the UFO phenomenon, as seen by Vallee. These beings from a different dimension allegedly have the ability to program our belief structures to fit their ends and our times. For example, Vallee thinks that UFO's (or the pilots thereof) bring their own salvation myth - as in the "Space Brothers" concept - in an attempt to found a new religion.

In an attempt to understand UFO's, Vallee would point to a need to see reality not in terms of a "universe" but a "multiverse". What usually passes for coincidence or synchronicity may in fact be programmed events from another dimension. As always, John Schroeder's review and analysis was enlightening and entertaining and the UFO Study Group appreciated his contribution to the meeting.

05/05/2000 ICE:
THE ULTIMATE DISASTER
A BOOK REVIEW

By Frank Brown

It is 5:00 p.m. in Boston and the people rushing home from work hardly notice how the setting sun seems to hang on the horizon. After several hours, people start to wonder why darkness is not coming and they start to fear the faint dull roar they hear. Some people feel light on their feet, some have that "I could jump over anything" feeling. Animals act skittish and suddenly start to migrate in the same direction. The sky reddens as huge clouds of dust begin to blot out the sun. Next, a steady wind starts to blow. As the wind grows stronger, the faint dull roar heard earlier grows louder as its source is moving closer.

Then a stillness sets in and the air seems like it is being sucked up like a giant vacuum cleaner. There is no sign of movement; the animals are gone. After a few minutes, the winds are back, with gusts up to 100 miles an hour. Trees are plucked out of the ground, trains are tumbled around like hockey pucks. As the wind jets to 200 miles per hour, buildings and everything above ground is decimated.

After forty-eight hours, the storms and quakes subside and the temperature comes back to normal for this time of year - springtime - as it continues to rise. By the next day, the third since the start of the shift, the temperature has hit 103 degrees. Just what one would expect in equatorial Africa at this time of year. From Boston to St. Paul to Seattle to Anchorage, out come the Bermuda shorts. Layers of mud spread for thousands of miles. The decaying bodies of animals of every size and shape are found in caves where they huddled together in their last moments. To explain why Dr. Jeffery Goodman wrote this we must return to a night long ago.

It was almost midnight and the band of men stood quietly waiting in the dark for an unprecedented event to take place, one that could not happen again for twenty-five thousand, eight hundred and ninety (25,890) years. These were no ordinary men. They were the survivors of a civilization destroyed by a sudden shift

in the earth's terrestrial axis triggered by a massive accumulation of ice at the south pole.

This is from chapter one, "the absolute first wonder of the world". In the latter part of the chapter, many questions are asked about the great pyramid. Such as "What is it that attracts men to it like a magnet? What strange and mystic things about it change men's lives? What profound and physical forces have come into men's lives as they examine and measure to try to find the secret of the pyramid?"

To understand this strange force, to understand why this power force acted on some men and not on others can be accomplished only by a careful examination of the facts. As we begin to explore and understand the seemingly magical passage-ways and mysterious chambers of the great pyramid, as we move up one corridor and down another, passing into and out of its three rooms, we hear our footsteps echo up and down the vast hallways of the grand gallery. Citing some evidence and ignoring vast sums of other evidence, most Egyptologists believe that Pharoah Khufu (sometimes known by the Greek name "Cheops") built the pyramid as a tomb.

New evidence demonstrates this theory untenable. This whole tomb theory is nothing more than an unreasonable hypothesis advanced by most Egyptologists based solely upon the mystic writings of the Greek metaphysician Herodotus (who traveled to Egypt 3,596 years after the great pyramid was built). Herodotus wrote of what he learned from the Priesthood of Egypt.

TO BE CONTINUED

EDITOR'S NOTE:

Darn it Frank, you really know how to keep us in suspense! Honest folks, if Frank had given me the entire book review, I would not have stopped in the middle like this. I guess we all will have to wait for the next issue for the conclusion of this book review.

PARAPSYCHOLOGY MODEL MAKES MONEY

By John Schroeder

Seven people attended the January 4, 1989 meeting of the Parapsychology Committee at the Schroeder home. In the sharing session, Walter Palmer discussed interesting hypotheses relating extremely low frequency waves to psychological and parapsychological insights. He also cited purported physical healings attributed to bombardment of the injury site by sound waves or by creating an electromagnetic field around the wound. For example, broken bones healed much faster under electromagnetic stimulation according to The Body Electric, Electromagnetism and the Foundation of Life, by Robert O. Becker, MD and Gary Selden, Published by William Morrow, New York, NY, copyright 1987, containing 347 pages at about \$8.00.

John Schroeder then explained the Harold Puthoff and Russell Targ model planned to earn money in the stock or futures markets by use of "Associative Remote Viewing" to stimulate accurate predictions. Since psychics do not relate to letters of the alphabet or numbers well, Puthoff and Targ substituted pictorial images for the targeted stock or product future. At first one member of the group selected the target image and participated in the psychic response, but his dominant impact telepathically skewed results. Similarly, repetition of succeeding experiments in the same room led to "carry over responses" which clouded results. Data showed an average of 50 percent hits: exactly what would be expected with uneducated guesses.

John Houck adapted the experiment using a bank of 75 photos from which two were selected as targets by objective computer analysis. A nonparticipant then culled one photo, and the psychic group responded to that with exhilaration or rejection. Short term investments in futures or one day investments in the stock market were placed according to psychic predictions. Some valuable lessons were learned. If the intended use for the earnings was charitable, the success rate was high. If it were to support parapsychological experiments in which the participants might benefit, success was low. Expecting the psychics

who had scored high on Monday's stock prediction to hit similarly on four succeeding days was a mistake. Frequency proved to have diminishing returns. Despite "bad days", the money making average was 54 percent -- a profitable ratio. Whether this profit was due to an ascending stock market could, however, not be determined.

After refreshments, the John Lear paper was discussed. Most found its scenario for cooperation with controlling aliens frightening; but decided that a few "facts" were so unbelievable that they muted the credibility and impact of the rest of the evidence adduced. For example, those present found it impossible to believe that a delayed bomb could be capable of going through nearly two miles of rock before it detonated to destroy the "alien underground sanctuaries" supposedly in Utah, New Mexico and beneath at least one US military base.

The next Parapsychology Committee meeting is scheduled for 7:30 p.m., February 1, 1989 at the Schroeder home, 4991 Miami Street in St. Louis. Phone 352-3058 for more information. Hopefully, UFO videos relevant to parapsychology will be shown and discussed.

ATTENTION STARGAZERS: WE WANT YOU!

In order that you can further your quest for knowledge about our universe, WE WANT YOU to come to the Linneman Branch Library at Elm and Duchesne in St. Charles, Wednesday, February 15, 1989 from 7:00 to 8:30 p.m.

Astronomer Dave Kapp will give us a guided tour of our solar system ... and beyond. This up-to-date commentary and slide show is free and open to the public. Interested school age children are encouraged to attend.

This meeting is sponsored by the St. Charles UFO Research Committee and the Mutual UFO Network.

LIBRARY CORNER

By Peggy Roppolo

This is going to be a short report this month. The Library Committee has decided to take a well earned rest. I was doing some figuring and since the start of September, I have averaged 10 to 15 hours per week! This does not include committee meetings or report writing. This 160 to 240 hours was spent exclusively on working the archives.

And thanks to contributions, the Library Committee received at the December Christmas Party. I can continue my work. I was in serious need of notebooks and a few members managed to locate some in their homes for me. Thank you!

This report is brief however, for another reason. One which everyone is aware of by now. The uncertainty about where the next "Sunday" meeting was to be held. Thankfully, that has been resolved for now. Hopefully, I will be able to show off more of our library in February. Remember, books can be checked out by just showing your membership card. The editor was kind enough to print our catalog as it now stands in the December issue of The UFO Enigma. If you have a special request, call Joe Palermo or myself and we will try our best to get it to you.

Food for thought: If you do not request, we do not know what the membership is interested in.

ST. CHARLES RESEARCH COMMITTEE

By Jean Smith

The January, 1989 meeting of the St. Charles Research Committee was held as usual on the third Tuesday of January (01/17/89). We heard an impressive report from Ralph Fromme, a Missouri MUFON State Section Director, on the Gulf Breeze, Florida sightings. Ralph and his family vacationed in Florida and Ralph spoke with Don Ware, Florida MUFON State Director, and brought back several interesting pictures on well viewed displays which is supporting evidence of these sightings.

Ralph not only brought us up to date on Gulf Breeze and what's happened to "Mr. Ed", but gave us an interesting perspective of the community in general. Thanks go to Alex Horvat for assisting Ralph in showing the display of pictures to everyone at the meeting individually. These included Ralph's own pictures of the "burnt circle" on the field by the high school which still is visible one year later.

The Gulf Breeze case began on November 11, 1987 involving "Mr. Ed" and his family. Mr. Ed had his business office located in his home. Mr. Ed looked out a window, saw something and started taking pictures. The numerous photographs make this a very well documented case. This is not an "open and shut" case which has become highly controversial among ufologists around the country.

Several books and magazines were reviewed. Magazines included Science Digest (March '89), Discover (Dec '88) and Strange Magazine (#3). The UFO Enigma is trading news letters with the UFO Contact Center in Washington State. As a result, copies of The Missing Link will hopefully find their way into the Study Group library.

In response to a question from a visitor at the meeting, Bruce Widaman explained the modern history of UFOs and our governments involvement. In 1946, the U.S. Government covered up real data citing "National Security". In the 1950s and 1960s, our government insisted that "... There is no such thing as UFOs." Then in the 1970s, the government said "If there are UFO's, ... they are no threat." In the 1980's, a closed hearing was held in U.S. Federal Court. The hearing was classified Top Secret and the government advised that UFOs "Would be a threat" to National Security. Wouldn't it be nice if our government made up it's mind and got it's story straight.

**BOOK REVIEW OF
ALIEN AGENDA BY
CLIFFORD WILSON, PH.D.**

Reviewed by Alex Horvat
(Not a PH.D.)

"There is no doubt the aliens are among us and now we know why!" Clifford Wilson continues on the front cover with pledges of suppressed eyewitness reports, the startling secret of the ET's, horrifying perils and shattering revelations from one of the greatest authorities on alien contact in the world today!

If the beginning of this review sounds a little bit like a grocery store scandal sheet, it is because Wilson apparently used that concept to model his marketing approach for the second release of The Alien Agenda.

A confession here, I did start the book with great expectations having not read the first Alien Agenda which was published in 1974.

The promise of "Complete updating and startling new evidence about the present danger threatening earth." left me looking for same. The result apparently is that the vast majority of the book is concerned with those documented cases prior to 1974 with a mention of the Mundrabilla incident in Australia in January 1988. If someone can enlighten me as to WHERE such startling new information and evidence is, I would be happy to reevaluate my position (After all, at the pay rate for this review that's all I can afford).

Packaging and John Keel are apparently the two big keys in this book. Wilson leans so heavily on quotes and excerpts from Keels UFO's: Operation Trojan Horse, that at times I wondered if Wilson and Keel share the same bank account. Keels book was published first in London in 1973 and Wilsons in 1974.

Wilson credits Keel with backing Dr. Edward Condon's assessment of the UFO phenomenon, yes The Condon Report. However, Wilson pulls out an interesting sidelight to that commentary by Keel; He suggests that the real UFO story may encompass more than the actual observed manifestations. Keel states, "We should seriously consider the influence of a world of illusion and hallucination, where the unreal seems very real, and where

reality itself is distorted by strange forces which can seemingly manipulate space, time and physical matter - forces which are almost entirely beyond our powers of comprehension."

Those into Metaphysics certainly would be quoting renowned Ufologists such as Wilson For those who plan to utilize such quotes they would be short changing Wilsons whole picture.

It seems as though Wilson touches on many parts of the UFO story - The Philadelphia Experiment, the July 30, 1952 sightings over Washington D.C. and an explanation of the temperature inversion theory by Professor Donald (MJ-12) Menzel of Harvard (just to name a few).

The theories that would be under the horrifying perils and shattering revelations headline are again co-hosted by John Keel.

The possibility of an army of hypnotized slaves that have been programmed to take action at a given time, with no option but to obey is one scenario that Wilson offers. This scenario is part of his overall prospect of some kind of Armageddon. The zombie hypnotized slaves versus the good of mankind. While strong hints are given prior to these scenarios, it is blatantly obvious that Wilson is attempting to climb the mount to deliver a sermon of sorts.

The explanation for Ezekiels Wheel (OR spacecraft?) and his analysis of Erich Von Danikens comments left me more confused than amused. But wait ... You be the judge:

Wilson states that Von Daniken does not accept that Ezekiel was in touch with an Almighty God but quotes Von Daniken when it serves his purpose by saying "This kind of locomotion seems to me to be quite incompatible with the idea of an Almighty God." Wilson purports that Von Daniken makes a relevant point that God does not need a space vehicle, a UFO to move around in. He is omnipresent and omnipotent - everywhere present and all-powerful. He speaks and it is done." Well, by now you get the point. My question, "Is that what Von Daniken really meant?"

What Wilson really means is summed up in the last 23 pages of the book beginning with UFO'S AND ARMAGEDDON. Wilsons fact is the continuing battle of forces of evil against the Almighty God. While claiming that his book is not a theological

textbook (I'll certainly agree with that) he does say to accept the fact of that conflict as it is given in the Bible. "There we learn that a final BATTLE OF ARMAGEDDON, will take place when the forces of evil will be destroyed.

In order not to spoil any suspense I may have inadvertently created, the ending to this saga will not be made available. After all, don't you hate it when someone tells you the end of the movie before you see it? "Yeah, I hate it when that happens."

Wilson closes by sharing with us a few personal experiences that have hardened his belief. While interesting, it (or the rest of the book) won't compel me to give this one a high recommendation. Unless, of course, I run into a group of hypnotized UFO zombies. Gotta go, I hear a strange buzzing sound, weird footsteps and a knocking at my door.

P.S.: I give this book a one saucer rating out of a possible four.

OZARK UFO CONFERENCE APRIL 14 - 16, 1989

Plan now attend the Ozark UFO Conference in Eureka Springs, Arkansas on April 14, 15 and 16. The objective of this annual conference is to provide such a forum for the many dedicated researchers to present their findings and conclusions, and to provide a diversified and illuminating program for all attending.

There will be from 15 to 18 presentations. Speakers include Dr. James W. Deardorff, British researchers Timothy Good and Norman Oliver, Cynthia Hind of Zimbabwe, Danny Gordon, Robert Reid (detailing his involvement in the Gulf Breeze case) and Daniel W. Fry (author of The White Sands Incident).

As was the case last year, the site for the conference will be the beautiful INN OF THE OZARKS in Eureka Springs, the "Switzerland of Arkansas." The conference will begin at noon on Friday, April 14th, and will conclude at noon on Sunday, April 16th. Special room rates are \$36.00 single occupancy and \$39.00 double occupancy. Rooms can be reserved at any time by writing or calling:

Inn Of The Ozarks
P.O. Box 431
Eureka Springs, AR 72632
(501) 253-9768

Please indicate that the reservations are for the Ozark UFO Conference in order to receive the special room rates.

The registration fee for the entire conference is \$35.00. Registration fees should be sent to:

Ozark UFO Conference Fund
Route 1, Box 220
Plumerville, AR 72127

For more information concerning this conference, please call (501) 354-2558.

NIKOLA TESLA MAN AHEAD OF HIS TIME (or How To Build a UFO)

By Bill Jones

Nikola Tesla, inventor of alternating current motors, did the basic research for constructing electromagnetic field lift-and-drive aircraft / space craft. From 1891 to 1893, he gave a set of lectures and demonstrations to groups of electrical engineers. As part of each show, Tesla stood in the middle of the stage, using his 6' 6" height, with an assistant on either side, each 7 feet away. All 3 men wore thick cork or rubber shoe soles to avoid being electrically grounded. Each assistant held a wire, part of a high voltage, low current circuit. When Tesla raised his arms to each side, violet colored electricity jumped harmlessly across the gaps between the men. At high voltage and frequency in this arrangement, electricity flows over a surface, even the skin, rather than into it. This is a basic circuit which could be used by aircraft / spacecraft.

The hull is best made double, of thin, machinable, slightly flexible ceramic. This becomes a good electrical insulator, has no fire danger, resists any damaging effects of severe heat and cold, and has the hardness of armor, besides being easy for magnetic fields to pass through.

The inner hull is covered on its outside by wedge shaped thin metal sheets of copper or aluminum, bonded to the

ceramic. Each sheet is 3 to 4 feet wide at the horizontal rim of the hull and tapers to a few inches wide at the top of the hull for the top set of metal sheets, or at the bottom for the bottom set of sheets. Each sheet is separated on either side from the next sheet by 1 or 2 inches of uncovered ceramic hull. The top set of sheets and bottom set of sheets are separated by about 6 inches of uncovered ceramic hull around the horizontal rim of the hull.

The outer hull protects these sheets from being short-circuited by wind blown metal foil (Air Force radar confusing chaff), heavy rain or concentrations of gasoline or kerosene fumes. If unshielded, fuel fumes could be electrostatically attracted to the hull sheets, burn and form carbon deposits across the insulating gaps between the sheets, causing a short-circuit. The space, the outer hull with a slight negative charge, would absorb hits from micro-meteorites and cosmic rays (protons moving at near the speed of light). Any danger of this type that doesn't already have a negative electric charge would get a negative charge in hitting the outer hull, and be repelled by the metal sheets before it could hit the inner hull. This wouldn't work well on a very big meteor, I might add.

The hull can be made in a variety of shapes; sphere, football, disc, or streamlined rectangle or triangle, as long as these metal sheets, "are of considerable area and arranged along ideal enveloping surfaces of very large radii of curvature," p. 85. My Inventions, by Nikola Tesla.

The power plant for this machine can be a nuclear fission or fusion reactor for long range and long-term use to run a steam engine which turns the generators. A short range machine can use a hydrogen-oxygen fuel cell to run a low-voltage motor to turn the generators, occasionally recharging by hovering next to high voltage power lines and using antennas mounted on the outer hull to take in the electricity. The short-range machine can also have electricity beamed to it from a generating plant on a long-range aircraft / spacecraft or on the ground. (St. Louis Post-Dispatch, Nov. 24, 1987, Vol 109, No. 328, "The Forever Plane" by Geoffrey Rowan, p.D1, D7.) (Popular Science, Vol

232, No. 1, Jan. 1988, "Secret of Perpetual Flight? Beam Power Plane," by Arthur Fisher, p. 62-65, 106)

One standard for the generators is to have the same number of magnets as field coils. Tesla's preferred design was a thin disc holding 480 magnets with 480 field coils wired in series surrounding it in close tolerance. At 50 revolutions per minute, it produces 19,400 cycles per second.

The electricity is fed into a number of large capacitors, one for each metal sheet. An automatic switch, adjustable in timing by the pilot, closes, and as the electricity jumps across the switch, back and forth, it raises it's own frequency; a switch being used for each capacitor.

The electricity goes into a Tesla transformer; again, one transformer for each capacitor. In an oil tank to insulate the windings and for cooling, and supported internally by wood, or plastic, pipe and fittings, each Tesla transformer looks like a short wider pipe that is moved along a longer, narrower pipe by an insulated non-electric cable handle. The short pipe, the primary, is 6 to 10 windings (loops) of wire connected in series to the long pipe. The secondary is 460 to 600 windings, at the low voltage and frequency end.

The insulated non-electric cable handle is used through a set of automatic controls to move the primary coil to various places on the secondary coil. This is the frequency control. The secondary coil has a low frequency and voltage end and a maximum voltage and frequency end. The greater the frequency the electricity, the more it pushes against the earth's electrostatic and electromagnetic fields.

The electricity comes out of the transformer at the high voltage end and goes by wire through the ceramic hull to the wide end of the metal sheet. The electricity jumps out on and flows over the metal sheet, giving off a very strong electromagnetic field, controlled by the transformer. At the narrow end of the metal sheet, most of the high-voltage push having been given off, the electricity goes back by wire through the hull to a circuit breaker box (emergency shut off), then to the other side of the generators.

In bright sunlight, the aircraft / spacecraft may seem surrounded by hot air,

a slight magnetic distortion of the light. In semi-darkness and night, the metal sheets glow, even through the thin ceramic outer hull, with different colors. The visible light is a by-product of the electricity flowing over the metal sheets, according to the frequencies used.

Descending, landing or just starting to lift from the ground, the transformer primaries are near the secondary weak ends and therefore, the bottom set of sheets glow a misty red. Red may also appear at the front of the machine when it is moving forward fast, lessening resistance up front. Orange appears for slow speed. Orange-yellow are for airplane-type speeds. Green and blue are for higher speeds. With a capacitor addition, making it oversized for the circuit, the blue becomes bright white, like a searchlight, with possible risk of damaging the metal sheets involved. The highest visible frequency is violet, like Tesla's stage demonstrations, used for the highest speed along with the bright white. The colors are nearly coherent, of a single frequency, like a laser.

TO BE CONTINUED

EDITORS NOTE: This is the first part of a two part article. Watch for the second half in next months issue. Perhaps the most interesting facet of Mr. Jones article is that we see described a very feasible design for a UFO using technology derived from 100 year old principles.
